

## **Develop a Web Application for an Online Bookstore:**

- Create a login page and a product page listing available books by category.
- Use CSS to style the pages and JavaScript for form validation and search functionality.
- Allow users to select books, calculate the total cost, and display the selected items on a confirmation page.

## **❓ Build a Web-Based Event Management System:**

- Design a registration form where users can sign up for different events.
- Use CSS for a responsive layout and JavaScript for real-time form validation.
- Add a feature where users can choose event packages and display the total registration fee dynamically.
